***"Total Payment" is the sum of the member's liability (deductible, copay, coinsurance) and the insurance plan liability across all members and plans in the APCD. This is also generally equal to the "allowed amount" or "negotiated rate". "Total Payment Per Single Day Dose" is calculated by dividing the total payment by the total number of days a prescription was indicated to last. Total figures are influenced by the number of participating insurance plans in the APCD, prescribing practices, and insurance benefit design/coverage.
